**Question 1** | Correct | Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

**Note:** No need of counter increment for declarations and scanf() and count variable printf() statements.

**Input:**

A positive Integer n

**Output:**

Print the value of the counter variable

**Answer:** (penalty regime: 0 %)

```
1  #include <stdio.h>
2
3  int main()
4  {
5      int n, count = 0;
6      scanf("%d", &n);
7
8      if (n == 1)
9      {
10         printf("%d", count);
11     }
12     else
13     {
14         count = 5 * n + 2;
15         printf("%d", count);
16     }
17
18     return 0;
19 }
```

|   | Input | Expected | Got  |   |
|---|-------|----------|------|---|
| ✓ | 2     | 12       | 12   | ✓ |
| ✓ | 1000  | 5002     | 5002 | ✓ |

|   | Input | Expected | Got |   |
|---|-------|----------|-----|---|
| ✓ | 143   | 717      | 717 | ✓ |

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
